The IXP History Collection Project

The IXP History Collection is an ongoing project which seeks to record and document histories of the Internet Exchange Points (IXPs) which form the core of the Internet's topology.

Collecting and Preserving Digital Heritage

Collecting and Preserving Digital Heritage

Digital Heritage

The UNESCO (2003) Charter on the Preservation of Digital Heritage, characterizes digital heritage as "unique resources of human knowledge and expression" that embrace

"cultural, educational, scientific and administrative resources, as well as technical, legal, medical and other kinds of information created digitally, or converted into digital form from existing analogue resources. Where resources are 'born digital', there is no other format but the digital object.

[...] the disappearance of heritage in whatever form constitutes an impoverishment of the heritage of all nations"

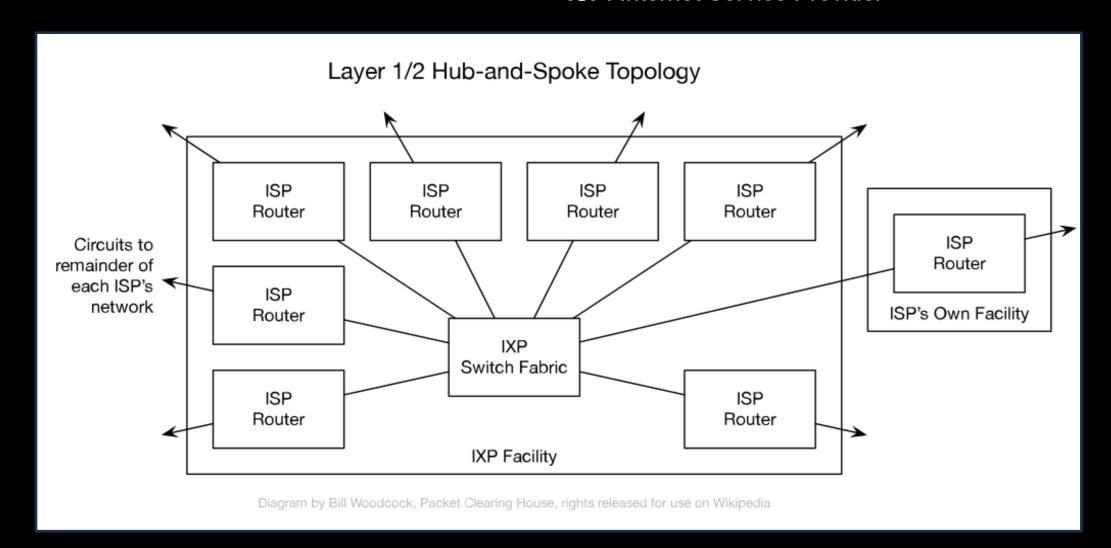

Collecting and Preserving Digital Heritage

Federal Internet Exchange

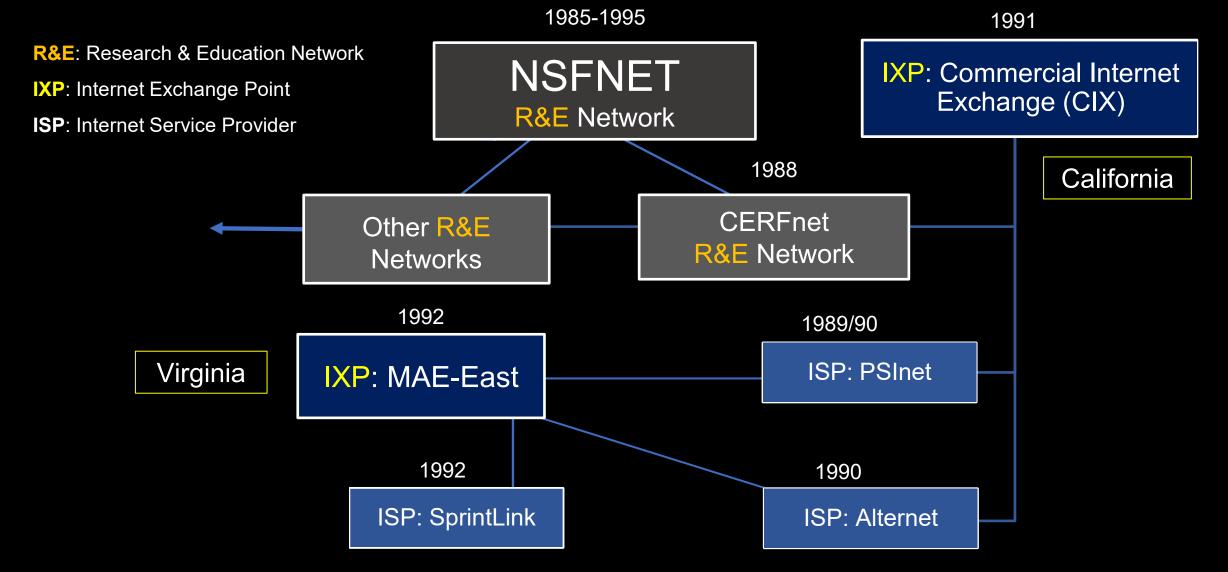

The First Commercial IXPs in the US

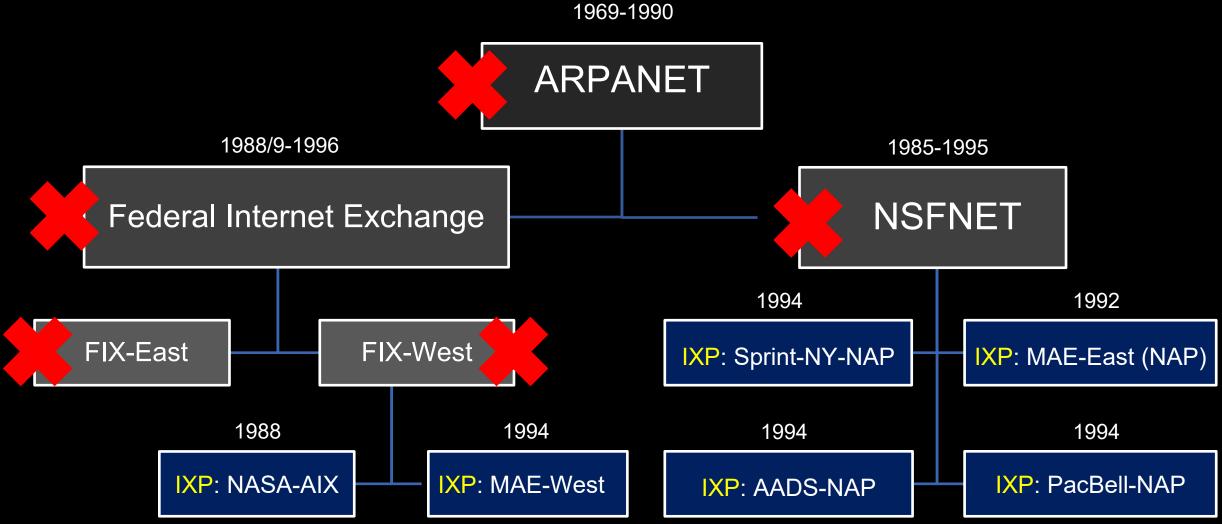

The NSFNET Transition

Early IXPs – United States

1988: NASA-AIX - NASA Ames Internet Exchange (California)

1988/9: FIX - Federal Internet Exchange (Maryland, California)

1991: CIX - Commercial Internet Exchange (California)

1992: MAE-East (NAP) - Metropolitan Area Exchange, East (Virginia)

1994: AADS-NAP - Ameritech Chicago NAP (Illinois)

1994: PacBell-NAP - PacBell San Francisco NAP (California)

1994: Sprint-NY-NAP - Sprint New York NAP (New Jersey)

1994: PCH - Packet Clearing House (California)

1994: MAE-Chicago - Metropolitan Area Exchange, West (Illinois)

1994: MAE-NY- Metropolitan Area Exchange, New York City

1994: MAE-West - Metropolitan Area Exchange, West (California)

1995: MAE-LA - Metropolitan Area Exchange, Los Angeles (California)

1995: HIX - Hawaii Internet Exchange

Bottlenecks

Early International Networking Efforts

NORSAR in Norway became the first organization outside the US to be connected to ARPANET. NORSAR's TIP was installed in June 1973. NORSAR's ARPANET-connection was primarily used for seismic data exchange.

EUnet, an abbreviation for European Unix Network, was founded in 1982 as a pan-European cooperative computer network to provide networking services to academic and corporate research communities based on Unix operating systems and X.25.

Early IXPs Elsewhere

1992: D-GIX-Distributed Global Internet Exchange (Sweden)

1993: NIX-Norwegian Internet Exchange (Norway)

1993: FICIX-Finnish Communication and Internet Exchange (Finland)

1994: AMS-IX Amsterdam-Amsterdam Internet Exchange (Netherlands)

1994: DIX-Danish Internet Exchange (Denmark)

1994: LINX-London Internet Exchange (United Kingdom)

1994: Munich-IX - Munich Internet Exchange Service (Germany)

1994: NSPIXP-1 - Network Service Provider IXP (Japan)

1995: GIGA-PIX - Gigabit Portuguese Internet Exchange Point (Portugal)

1995: HKIX: Hong Kong Internet Exchange (China)

1995: MSK-IX Moscow - Moscow Internet Exchange (Russia)

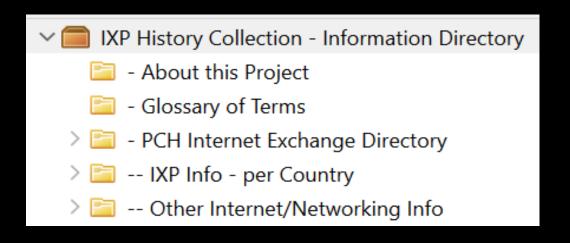

1995: SFINX - Service for French Internet Exchange (France)

Broad Aims

- a) develop a corpus of relevant information for documenting IXP histories, and
- b) develop a preservation strategy for the safe-keeping of such information.

Use Zotero to develop a corpus of relevant information for documenting the history of IXPs.

Zotero is a free, open-source research tool, created by the Center for History and New Media at George Mason University, with its first release in 2006.

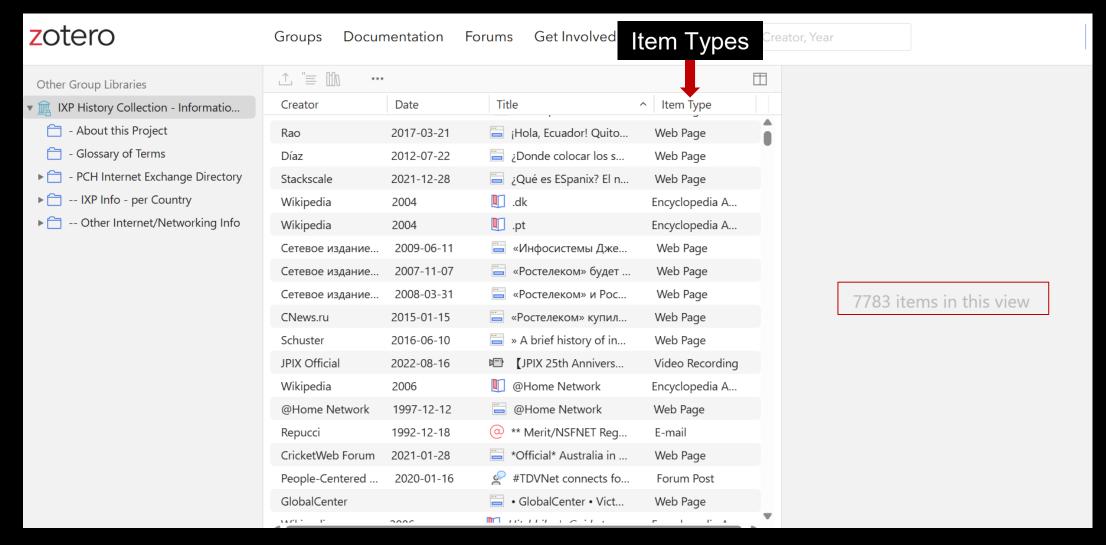

The IXP History Collection – Information Directory is currently available as a work in progress:

https://www.zotero.org/groups/4944209/ixp_history_collection_-_information_directory/library
